

**DEADLINE FOR APPLICATIONS EXTENDED!**

INTERNATIONAL NETWORK ON  
**INORE**  
OFFSHORE RENEWABLE ENERGY

# 2017 INORE North American Symposium

**May 18th to 22nd**

**Oregon State University, Portland, Oregon, USA**

Are you a graduate student, early-stage researcher, or young professional in offshore renewable energy? You're invited to Oregon State University this May for INORE's annual North American Symposium! Join us for four days of research sharing, idea exchange, workshops, and site visits in a dynamic and informal environment. Meet and collaborate with like-minded individuals from around the world specializing in offshore renewable energy, including:

- Technology and engineering of offshore renewable energy devices
- Environmental monitoring and sustainability of marine renewables
- Marine resource assessment
- Policy and human dimensions of offshore renewable energy

Oregon is home to the Pacific Marine Energy Center (PMEC). Developers will soon be able to test at PMEC's full-scale, grid-connected South Energy Test Site. The symposium will draw on Oregon's experience **bringing research concepts for offshore energy technologies from the lab to the ocean.**

Speakers include key players in offshore renewable energy in the Pacific Northwest of the United States, such as Oregon Sea Grant, Northwest National Marine Renewable Energy Center, and more!

**Thanks to our sponsors, symposium activities, food, and lodging are free for attendees.** This year we will also be able to offer a limited number of **travel grants** to partially reimburse costs for long-distance attendees with financial need.

**DEADLINE EXTENDED to March 22, 2017**

**To apply, please visit:**
